RCM Technologies

Enterprise Business Solutions

Specializing in business solutions that revolutionize the way your company operates, RCM Technologies Enterprise Business Solutions is a recognized top-tier Microsoft National System Integrator and an expert in business solution implementations, project management and training services.

RCM's solutions are custom tailored to your needs and deliver measurable improvements in the areas most critical to your Company's success. Our powerful project management tools streamline and coordinate project-based initiatives across your organization, and our highly skilled consultants and technicians augment and enhance your team's skills.

RCM helps your company leverage business investments in technology and capitalize on emerging tools and systems. RCM makes technology a critical instrument for your success.

A better way to find films.

Spout
Media and Entertainment Solution

Client Situation

Spout is a company founded by four filmmakers and film fans who had a vision to form an on-line community where fans could find films, meet people and have a rich online community experience. Spout's mission was to close the time and marketing gaps that exist between film festivals, multiplexes and living rooms. They sought to blend technology, personalization and passion to give people a unique place to buy, discuss and organize their favorite films.

Solution

RCM developed Spout.com to be the first online community focused on connecting film lovers with films, great conversation and intuitive film exploration. The site offers advanced user-centric web tools and technologies that give film fans a real sense of community and a better

experience for discussing, organizing and buying films. The tools developed for Spout.com not only give users new capabilities, they create a better and more trusted human-centered user experience. Spout members search for, organize, recommend and buy their favorite films, as well as interact with each other through an organic, intuitive online interface. Spout.com is a robust online film community and a place to build an alternative, grassroots promotion and distribution channel for filmmakers.

Value

Spout.com integrates film information from a variety of content providers, merging it with inventory data and user-provided commentary. It's then wrapped in with a powerful online commerce engine for the purchase of film

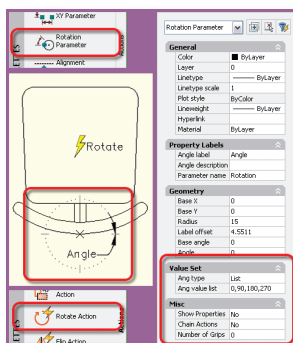

and videos. Spout is committed to utilizing site capabilities to create and enhance human experiences and interaction with the film community and with film itself.

American Seating
Manufacturing Solution

Software and Services

- AutoCAD ADS (rebuilt)
- › Managed Object ARX API
- › Microsoft C# 2.0
- Microsoft .NET
- Autodesk Managed Object ARX

Client Situation

For over 120 years American Seating has set the standard for product design, durability and comfort for various seating product lines with optional features to suit varying budgets, aesthetics and use requirements. To meet their clients' customized needs, the company offers a vast array of options.

American Seating found that the process for designing customized seating solutions was extremely time intensive. When creating a seating layout or design, hundreds of thousands of components make up a single AutoCAD drawing, and the company's designers desired a faster, trustworthy application to ensure the correct information was being recorded in each seating solution drawing in a timely manner. The company sought to reduce drawing time and bridge the gap between seating layout design and manufacturing production.

Solution

RCM rebuilt an AutoCAD ADS application using the Managed Object ARX API and Microsoft C# 2.0. The solution was built on a client/server based configuration so that each installation of the application could be centrally managed. Additionally, all standards were based to provide consistent drawings between users (layers, text styles, line types, etc.).

Value

The new Seating Layout Tool has enhanced the engineering team workflow, allowing designers to design chairs quickly and then further refine the layout to fit individual client needs. Highly configurable, the system also allows many aspects of the application to be changed without the need to recompile and redeploy the application.
