

An intuitive and easier way to successfully complete projects.

Microsoft Project Server 2010 is built on Microsoft SharePoint Server 2010, bringing together powerful business collaboration platform services with structured execution capabilities to provide flexible work management solutions. Project Server 2010 unifies project and portfolio management to help organizations align resources and investments with business priorities, gain control across all types of work, and visualize performance using powerful dashboards.

- Microsoft Project Server 2010 provides unified project and portfolio management capabilities to help ensure organizations select and deliver the right projects; gain greater visibility and control of resources, leading to improved productivity and business performance.
- Microsoft Project Standard 2010 provides an intuitive and easier way to complete everyday projects.
- Microsoft Project Professional 2010 provides an intuitive and easier way to complete everyday projects with sophisticated resource management, collaboration and planning capabilities.

A Software Platform that Fulfills Your Business Needs

Arguably the biggest release for Microsoft Project in over a decade, Project 2010 will appeal to the most advanced professional project managers and the general information worker who wants to manage and report on everyday projects.

Project Server 2010 helps transform individual desktop project management by centralizing management of all work and projects across the enterprise. It creates better visibility and insight (analytics) for managers and decision makers so they can align enterprise work and resources with strategic organizational objectives.

In addition, Project 2010 makes it easier for all workers to use, even if they're mobile or if they're relatively inexperienced part-time PMs. It also increases performance for large enterprise deployments and makes it easier for integrators and ISVs to tap into the full power of the system (exposing key data files and adhering to a standardized database schema).

Where Microsoft® Invested

Work Management Solutions for Individuals,
Teams and the Enterprise

Enterprise Business Solutions

Unified Project & Portfolio Management

- A single server with end-to-end PPM capabilities, designed to select and deliver the right projects
- Centralized demand management for capturing all types of work
- Best in class portfolio selection capabilities
- Powerful, extensive and easy to use reporting infrastructure

Simple and Intuitive User Experience

- Project Standard combines the flexibility and ease of use of a tool like Excel with the power and sophistication of Project's scheduling engine
- Industry standard and most widely used project management tool
- Familiar interface and intuitive design enhances adoption and appeal, whether you use the client or the browser
- Powerful views simplify communication of schedule information and help intuitively manage resource assignments
- Web-based project editing in Project Server brings the power of Project Professional to the Web
- Easily copy and paste information to and from Office applications

Enhanced Collaboration and Reporting

- Built on SharePoint Server 2010: Unifies world-class collaboration capabilities with best of breed Project & Portfolio Management techniques
- Receive and respond to tasks effectively through Outlook, Outlook Web Access or Mobile Phone
- Workgroup collaboration solutions to effectively connect small teams of any PPM maturity level
- Create powerful dashboards, and enable users to create and modify reports on the fly
- Integrated timesheet and task status system

Scalable and Connected Platform

- Centralized administration of both project and portfolio management capabilities
- Easily and intuitively build and manage departmental cubes
- Integration with related Microsoft technologies provides a powerful, familiar and connected work management solution (Exchange, Visual Studio Team Foundation Server, Dynamics AX and SL)
- Comprehensive API makes it easy to integrate the EPM Solution with line of business applications
- Highly configurable solution with Enterprise scalability
