

What good is a project management methodology if you spend more time consolidating information and reporting status than you do managing projects?

## RCM's Unique Approach

The organizations we work with want to increase project success rates, profitability and customer satisfaction. Achieving these goals, however, can be difficult – unless you have the right management tool and a clear implementation strategy. Our Microsoft Project Server implementation approach provides just that. Everything we do, from gathering business requirements to designing customized reports and training users, is designed to help you realize these goals:

- Greater Consistency
- Increased Productivity
- Reduced Risk
- Improved Knowledge Share
- Greater Visibility
- Maximum Efficiency

## The Technology

Microsoft Office Project Server is ranked by Gartner® as a leader in the Project Portfolio Management industry. The Microsoft applications promotes more efficient management of projects and program portfolios. Only project managers will need a desktop application.

If Microsoft Office Project Server is right for your organization, RCM will work with your team to ensure implementation success. In order to ensure a proper deployment and the long term success of Microsoft Project Server, our project managers go the extra step to develop a comprehensive set of project deliverables including:

- Architecture Map
- Requirements Traceability Matrix
- Configuration Tables Document
- Application Design Document
- Installation Logs
- Configured Application
- System Loaded Resource Data
- System Loaded Project Data
- Custom Training Manuals
- User/Test Cases:
  - Test Scripts*
  - Test Results Document*
- Final System Documentation
- Custom Training Sessions
- Future Release Plan
